

**COUNTY OF SANTA BARBARA, CALIFORNIA  
RESOURCE RECOVERY & WASTE MANAGEMENT**

**NON-HAZARDOUS WASTE  
PERMIT PROCEDURES**

**PLEASE READ THESE INSTRUCTIONS VERY CAREFULLY**

1. A non-hazardous waste permit is required for disposal of some non-hazardous wastes (empty barrels, cans, asbestos, process wastes, etc.).
  - a. Empty pesticide containers must be triple rinsed and dry.
  - b. Asbestos must be nonfriable (unable to be crumbled with hand pressure), double bagged (small quantities), or encased in plastic (roll-offs or dump trucks). Plastic must be of sufficient thickness to not allow asbestos to break through it. Asbestos must remain encased after being removed from vehicle. An improperly encased load will be subject to substantial hazardous materials clean-up charges.
  - c. Leachable material such as process wastes, soil, diatomaceous earth, dredge material, etc. must be non-hazardous per Title 22, CCR, Division 4.5, Chapter 11, Article 3, Section 66261 et al., and must be less than 50 percent moisture (see Note in item 4).
2. A request for disposal is made in writing or via telephone to the RR&WM Operations staff stating the nature and quantity of the waste. Waste from outside the County can only be accepted if it can be recycled or used for cover material. The phone numbers are (805) 882-3600 or (805) 681-4345.
3. A permit package is sent to the generator including permit application and a non-hazardous waste manifest (this manifest can be copied for additional loads).
4. The generator completes the application and returns it, along with applicable analyses as requested by the Resource Recovery & Waste Management Division.
5. A permit is issued to the generator and a copy is sent to the applicable scalehouse, and one is retained on file at RR&WM Operations. The manifest is retained by the generator who completes the top portion. The hauler completes the middle portion of the manifest. Copies of the manifest are made by the generator and hauler to accompany each load.
6. When the load arrives at the scalehouse, the hauler gives the manifest, including permit number, to the weighmaster who inspects the load and checks the permit list to verify this load has been approved by the RR&WM Operations staff. If he/she finds the load acceptable, he/she signs the manifest and returns it to the RR&WM Operations office where it is retained.
7. The weighmaster will then assess the appropriate fee and the normal landfill/transfer station process will continue. If you need a disposal account with the County of Santa Barbara, please call the County of Santa Barbara Accounting Department at (805) 568-3129. Cash is required at the scalehouse if a disposal account is not obtained. There is no cash ability at the Tajiguas Landfill so the material must be weighed at one of the Transfer Stations and paid for prior to disposal at Tajiguas.
8. Most special wastes are only disposed of at the Tajiguas Landfill. Clarify this with County before hauling waste to any site.
9. Hauler needs to notify Tajiguas Landfill scalehouse at least one (1) hour before arrival and all loads must be at the landfill no later than 2:00 pm, to allow for proper disposal. Leachable material will not be accepted in wet weather conditions.
10. It is the responsibility of the generator to renew the permit upon its expiration.
